PROJECTS

RASD: AI-Based Insider Threat Detection System

09/2025 – 06/2026

Graduation project

- Cloud-native insider threat detection on AWS using ML-based behavioral analysis and Zero Trust enforcement, processing user telemetry in real time.
- Built a real-time insider threat detection system for Zero Trust cloud environments using Python and AWS.
- Designed a two-agent AI architecture: Agent 1 (offline Autoencoder that learns per-user behavioral baselines) and Agent 2 (online XGBoost classifier that scores live events in real time)
- Implemented automatic IAM enforcement across 4 Zero Trust tiers (allow, MFA, deny, session revoke)
